**Problem Statement:** What are all the factors that could influence residential home prices across the United States over the next decade? And how?

### MECE Framework

## **Overview of the MECE Framework**

The MECE stands for Mutually Exclusive Collectively Exhaustive. Also pronounced as “Me-See”. Different process, problems and their solutions are arranged in this framework. One can also design this framework while planning business strategies.

ME from MECE suggests to list all the mutually exclusive options which will not be overlapping and having no dependency to each other. These can be categorized into a group.

CE from MECE suggests to see the list of options which are collectively exhaustive, such options should cover all the relevant aspects of the issue.

The Framework contains Main Issue along with their sub-issues.
